During World War I and II, modern states for the first time experimented with feeding--and starving--entire populations. Within the new globalizing economy, food became intimately

intertwined with waging war, and starvation claimed more lives than any other weapon. As Alice Weinreb shows in *Modern Hungers*, nowhere was this new reality more significant than in Germany, which struggled through food blockades, agricultural crises, economic depressions, and

wartime destruction and occupation at the same time that it asserted itself as a military, cultural, and economic powerhouse of Europe. The end of armed conflict in 1945 did not mean the end of these military strategies involving food. Fears of hunger and fantasies of abundance were instead

reframed within a new Cold War world. During the postwar decades, Europeans lived longer, possessed more goods, and were healthier than ever before. This shift was signaled most clearly by the disappearance of famine from the continent. So powerful was the experience of post-1945

abundance that it is hard today to imagine a time when the specter of hunger haunted Europe, demographers feared that malnutrition would mean the end of whole nations, and the primary targets for American food aid were Belgium and Germany rather than Africa. Yet under both
